Professional Summary

ICT undergraduate with a strong mathematical foundation – studying ICT alongside Mathematics and Physics gives me the ability to model and solve complex computational problems with precision that goes beyond a standard ICT degree. Passionate about building applications that simplify everyday human experiences, with a growing interest in integrating AI and algorithmic thinking into practical solutions. Proven ability to lead teams in competitive environments, consistently reaching hackathon finals, and applying mathematical reasoning – from graph algorithms to weighted scoring models – to architect efficient, well-grounded software.

Work Experience

Aegis Sri Lanka

Call Center Agent

Sri Lanka

Nov 2022–May 2023

Handled inbound and outbound customer interactions in a fast-paced call center environment. Developed strong communication, active listening, and conflict-resolution skills through daily customer engagement. Consistently maintained professionalism under pressure while managing high call volumes.

Technical Skills

Languages:: Java, JavaScript, C, HTML5, CSS3

Frameworks & Libs:: React, Next.js, Angular, Spring Boot, Tailwind CSS, Bootstrap

Core Concepts:: Data Structures & Algorithms, Artificial Intelligence, Software Architecture, UI/UX Design, Database Administration, Mobile Development

Tools:: Git, GitHub, Docker, VSCode, IntelliJ IDEA, Netbeans, Codeblocks, Android Studio, Arduino

Software Projects

IoT & Mobile Integration

Smart Plant Health Monitoring System

2023–Present

Developed an Arduino-based monitoring system integrated with a mobile application to track and visualize plant conditions in real time. The system collects essential environmental data – soil moisture, temperature, and humidity – enabling users to monitor plant health and make informed care decisions through data comparison and analysis.

Technologies: Java, Arduino, Android Studio, Visual Studio Code, Arduino Sensors.

Full-Stack Development

Laptop Recommendation System

Ongoing

Designing a weighted scoring algorithm to recommend laptops based on user preferences including budget, performance needs, and usage type. The system interacts with users to gather requirements and integrates sentiment analysis via web-scraped reviews to validate suggestions with real-world feedback.

Technologies: React, Spring Boot.

Achievements & Hackathons

Intellicon '24 – AIESEC SLIIT (Team: Sentinels)

Runners Up – Ideathon

2024

Tackled the theme of AI-driven search and rescue for resource management following natural disasters. Engineered a solution utilizing LoRa bands and ESP32 hardware with radio signals, implementing the **Dijkstra Algorithm** to calculate the shortest rescue paths to survivors.

HackX 9 (University of Kelaniya) – Team Leader, Code9

Top 12 Finalist – Hackathon

2023

Led the team *Code9* as Team Leader to the top 12 finals with project *Edu VR* – an immersive VR platform designed to enhance classroom engagement. Gained extensive industry feedback, strengthened technical and teamwork skills, and delivered the final pitch to a large audience of faculty and industry professionals.

HackerRank

Gold Badge – Problem Solving

2023

Earned the Gold Badge by solving a wide variety of algorithmic and data structure problems, demonstrating strong logical reasoning and code optimization skills. Profile: hackerrank.com/profile/abeseqramanidas

MoraXtreme 9.0 (IEEE, University of Moratuwa)

Participant – Algorithmic Coding Competition

2023

Competed as part of a team in a rigorous algorithmic coding competition organized by the IEEE Student Branch. Solved multiple problems by applying knowledge of Data Structures and Algorithms, and strengthened collaborative problem-solving skills through team discussion under time pressure.

Education

University of Sri Jayewardenapura

Colombo

Bachelor of Physical Science in ICT, GPA: 2.31

May 2023–Mar 2026

Studying ICT alongside Mathematics and Physics, building an interdisciplinary perspective that strengthens analytical thinking and algorithm design. Core ICT focus areas include Software Quality Systems, Mobile Development, Artificial Intelligence, Software Architecture, UI/UX, and Database Administration.

Prince of Wales College

Moratuwa

G.C.E. Advanced Level

2019–2022

Information & Communication Technology (B), Mathematics (C), Physics (C)

JMC International School

Kalutara

G.C.E. Ordinary Level

2018

Mathematics (A), ICT (A), English (A), Science (C)

Certifications

Front-End Web Development: University of Moratuwa (CODL) | *Angular, HTML, CSS, JavaScript, Bootstrap* – built responsive and interactive web interfaces.

JavaScript Algorithms & Data Structures: FreeCodeCamp | *Algorithms, Data Structures, ES6, OOP, Functional Programming*

Extra-Curricular Activities

J'pura Voice Club: Tamil Task Master of the Dubbing Division (Aug 2024 – Mar 2026), overseeing TikTok dubbing projects and contributing through video editing, content writing, and voice dubbing.

Japura Flames Poetry Club: Wrote and published multiple original poems on the club's official Facebook page, contributing to its creative outreach and online presence.

IEEE Student Branch: Member of the IEEE Student Branch, University of Sri Jayewardenepura.
